### **HEATMOR™ ANNOUNCES EPA CERTIFIED X-SERIES OUTDOOR WOOD-FIRED HYDRONIC FURNACES**

**WARROAD MN**, May 19, 2015 – Heatmor™ announces the release of their EPA certified units that still uses the tried and true updraft system. The Heatmor™ X-Series Model 200X and 350X, have been tested by an EPA accredited independent laboratory and meet the qualifications of the EPA new source performance standard of .32 lbs/mmBtu heat output.

The Heatmor™ X-Series Model 200X maximum output rating is 184,459 BTU/hour with an eight hour output rating of 54,019 BTU/hour and an annual efficiency of 62% HHV. The Model 350X maximum output rating is 255,582 BTU/hour with an eight hour output rating of 89,753 BTU/hour and an annual efficiency of 58% HHV.

A renowned industry leader, Heatmor™ is recognized for quality, innovative design and product guarantee. The Heatmor™ X-Series Model 200X and 350X was designed to meet the emission limits set forth in the EPA new source performance standard, while still maintaining the Heatmor™ quality design customers know and trust.

“With continued instability in fuel prices the need to capitalize on renewable energy increases, consumers will continue to recognize the benefits and importance of outdoor wood furnaces,” says Gerry Reed, President and founder of Heatmor™. “The release of the Heatmor™ X-Series gives consumers the option to ‘go green’ while benefiting from the heating cost savings of an outdoor wood furnace.”

The Heatmor™ X-Series Model 200X and 350X are the answer to high heating costs, the demands of the EPA and the need to capitalize on renewable energy.

*Heatmor™ is considered to be the strongest, most durable stainless steel outdoor furnace in the industry, offering customers the finest outdoor wood heating system while meeting the needs of the environment and the outdoor wood furnace industry. Manufacturing quality outdoor wood furnaces since 1984, they have established a dealer network extending across the United States, Canada, and United Kingdom.
